EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

This communication is an Examiner's reasons for allowance in response to application filed on 04/10/04, assigned serial 10/822,271 and titled "Safelander"

The following is the Examiner's statement of reasons for the indication of allowable subject matter:

The examiner has searched a plurality of fields that are relevant to the subject matter of the claimed invention, but none of the prior art has been found teaches or suggests a remote piloting system configured for an onboard, manned piloted aircraft comprising:

"a sensor multiplexer receiver and transmitter means located onboard aircraft for accepting said aircraft performance and control parameters that are required by a ground-based simulator to replicate the major control and performance states of

Art Unit: 3663

aircraft, and then, when necessary, convert said performance and control parameters into digital format, add a unique aircraft identification, ID, to an outgoing radio frequency, RF, signal and broadcasting said outgoing RF signal to a Central Ground based processing Station (CGBS) which then transfers the aircraft performance and control data to a ground-based aircraft simulator; a ground-based aircraft simulator digital processor/computer that is configured to provide the computational and conversion capability to dynamically reproduce displays that exist in the operational aircraft onto the displays in the simulator and converts the remote piloting controls of the ground-based simulator for conning/guiding operational aircraft".

For that reason, the application is now allowable.
